

## Components

	NAME	DESCRIPTION	AUDIENCE
	<i>Nuclear radiation</i> teacher guide	This guide describes three alternative ways for students to explore properties of alpha, beta and gamma radiation.	teachers
	<i>What is nuclear radiation?</i> background sheet	This background sheet contains information for teachers on different types of nuclear radiation, their properties and how radiation doses are measured.	teachers
	<i>Investigating nuclear radiation 1</i> procedure sheet	Students experiment with isotopes to determine the relative penetrative properties of three types of radiation.	students
	<i>Investigating nuclear radiation 2</i> worksheet	Students use second-hand data to analyse the penetration levels of various types of radiation.	students
	<i>Investigating nuclear radiation 3</i> worksheet	This provides a framework for student use of an interactive learning object, <i>The alpha, beta and gamma of radiation</i> .	students

## Purpose

To **Explore** penetrative properties of alpha, beta and gamma radiation.

## Outcomes

Students:

- describe penetrative properties of alpha, beta and gamma radiation; and
- analyse data to explain differences in penetrative properties of alpha, beta and gamma radiation.

## Activity summary

ACTIVITY	POSSIBLE STRATEGY
<p>A laboratory procedure with associated questions, <i>Investigating nuclear radiation 1</i>, may be used to explore and explain penetrative properties of nuclear radiation.</p> <p>This activity provides opportunities to discuss differences in nature and properties of three types of radiation: alpha, beta and gamma.</p>	<p>Students perform an experiment and analyse data.</p> <p>teacher-led explanation of characteristics of different types of radiation</p>
<p>If equipment for this laboratory activity is not available then two alternatives are provided:</p> <ul style="list-style-type: none"> <li>• The worksheet, <i>Investigating nuclear radiation 2</i>, contains second-hand data that may be used to analyse penetrative properties of radiation; or</li> <li>• an interactive learning object, <i>The alpha, beta and gamma of radiation</i>, may be used to take measurements and provide data for the worksheet, <i>Investigating nuclear radiation 3</i>.</li> </ul>	<p>student activity using a worksheet or learning object and worksheet</p>

## Technical requirements

The learning object, *The alpha, beta and gamma of radiation*, is published by Education Services Australia. It can be accessed through the Department of Education WA portal (*K-12 Resources*). It is also available through Scootle at <https://www.scootle.edu.au/ec/viewMetadata.action?id=L45>.

Adobe Flash Player version 8 or later is required to view the learning object. This is a free download from [www.adobe.com](http://www.adobe.com).

The teacher guide, procedure sheet, worksheets and background sheet require Adobe Reader (version 5 or later), which is a free download from [www.adobe.com](http://www.adobe.com). The worksheets and procedure sheet are also available in Microsoft Word format.

## Teacher notes

Three alternatives are provided for this exploration of properties of nuclear radiation:

- *Investigating nuclear radiation 1* describes a laboratory activity that uses sources of alpha, beta and gamma radiation.
- For schools that do not have access to this equipment, *Investigating nuclear radiation 2* contains second-hand data that students may analyse.
- An interactive learning object, *The alpha, beta and gamma of radiation*, published by Education Services Australia provides a useful computer-based simulation of this activity. The 'Your task' screen embedded in the learning object may be replaced by the worksheet, *Investigating nuclear radiation 3*.

## Associated SPICE resources

*Nuclear reactions 2: Nuclear radiation* may be used in conjunction with related SPICE resources to address the broader topic of nuclear physics.

DESCRIPTION	LEARNING PURPOSE
<p><i>Nuclear reactions</i></p> <p>This learning pathway shows how a number of SPICE resources can be combined to teach the topic of ionising radiation and nuclear reactions.</p>	
<p><i>Nuclear reactions 1: Mines to medicine</i></p> <p>Students express their opinions on a moral issue after viewing a film of demonstrators at a uranium mine and after a medical physicist explains why nuclear medicine is so important to diagnostic and therapeutic procedures.</p>	Engage
<p><i>Nuclear reactions 2: Nuclear radiation</i></p> <p>Students investigate types and properties of radiation with particular attention to penetrative characteristics.</p>	Explore 1
<p><i>Nuclear reactions 3: Nuclear decay</i></p> <p>Students manipulate variables in an interactive simulation to investigate connections between decay and half-life. An alternative procedure using dice is provided.</p>	Explore 2
<p><i>Nuclear reactions 4: Decay chains</i></p> <p>In three separate interactive simulations, students experience modelling as an alternative way of exploring nuclear decay and half-life.</p>	Explore 3
<p><i>Nuclear reactions 5: Fission and fusion</i></p> <p>Worked examples explain how to calculate mass defect and binding energy for fission and fusion reactions. The experimental ITER fusion reactor is also discussed.</p>	Explain
<p><i>Nuclear reactions 6: Nuclear medicine</i></p> <p>Students explore applications of radioisotopes in medicine.</p>	Elaborate 1
<p><i>Nuclear reactions 7: Radioisotopes in research</i></p> <p>Fact sheets illustrate the use of radioisotopes in research being undertaken at The University of Western Australia.</p>	Elaborate 2
